Takmeel

Part of  
NADEC

Saudi Arabia

Takmeel is the in-house blow molding plant of Nadec, one of the biggest dairies in Saudi Arabia. Our first order with them was for the downstream equipment for 3 Sidel blow molders. Our supply included 6 x bagging machines, 2 x airveyor lines and 1 x conveyor line.

Subsequently they have ordered another line from us running 34,000bph which we installed successfully at 96% efficiency.

## Projects

---

1) Nestle

2) SAB (AB-Inbev)

South Africa

Both Nestle & AB-Inbev had unique problems with leaflet (barcode) applications. Their production lines were running at high speed and accumulation of product could occur through the applicators. Our machines had to apply from a standing position or running position and still maintain high accuracy placement of the label.

In both cases our applicators out-performed our competitor's equipment.

### Tupperware

Tupperware often supply plastic containers with lids. The challenge is to pack the container and matching lid together when the two items are manufactured on different injection molders in the plant.

Our conveyor system transported the various products out of the production hall and into a packing hall bringing the two parts together for the packer to pack together.

## Projects

1) Wadding -  
N.Z.

2) King Plastics -  
China

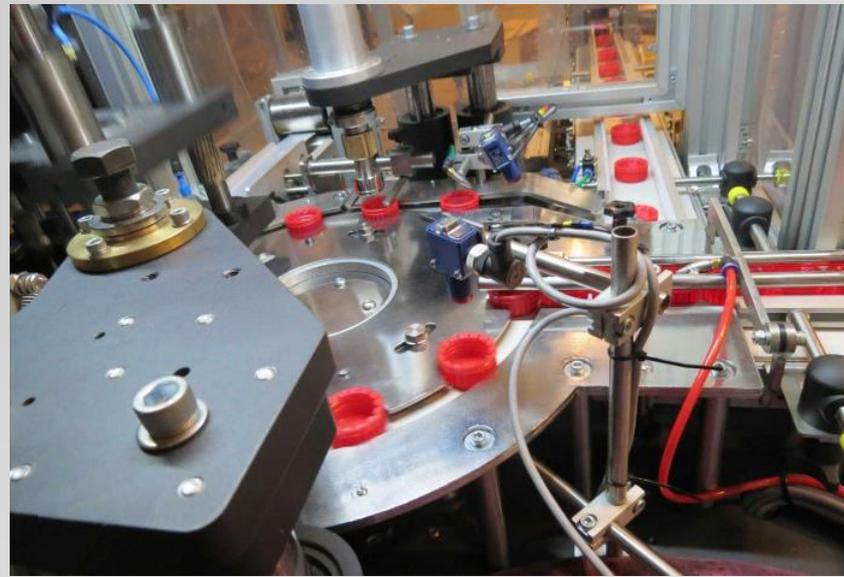

3) Wadding -  
Aust.

4) DeBoes -  
Belgium

We have installed our wadding machines at all of these companies across the globe successfully.

Productive Systems is proud of its achievements and successful installations in countries across the world.

We have a 100% success rate with our internationally installed equipment.

### Willowton Oil

### South Africa

Willoton Oil decided to move their bottle requirements in-house with Sidel and Sipa blow molding machines running from 350ml - 5L PET bottles.

Productive Systems supplied airveyoring, conveying, bulk conveyors, lowerators and line controls to successfully commission the complete plant in one installation.

Simba

Part of

Pepsico

South Africa

When Simba decided to automate their box palletizing production they requested Productive Systems to refurbish their existing stretch wrappers originally supplied by Productive Systems and incorporate the units in their new line.

The units were successfully installed and have been running above the specified speeds for over 7 years now.
